This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- Minimization of operational costs by work overloads and useless time in mixed-model sequences.
- Bounded activation of operators of assembly line in order to improve productivity.
- Economic compensation of excess effort of operators
- Economic gains for the company and operators because of the recovery of production drop.
- Computational experience linked to the Nissan's powertrain plant in Barcelona.
