This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- The Smart Waste Collection Routing Problem is introduced.
- Sensors provide real-time bins' fill-levels, used to define dynamic routes.
- Three approaches are studied to deal with the real-time information.
- A model to choose bins to visit considering fill-levels and locations is proposed.
- Collecting the more attractive bins improves the operation efficiency.
