This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Most used techniques: skin detection, brute force comparison and SVM.
- Classification scores: 39
- Predominant environment consisted of simple background and controlled light.
- Static and dynamic gestures are not recognized by the same approach.
- Gestures recognized and datasets are too small for real-world scenarios.
