This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

Ş

- A Gaussian mixture Hidden Markov model is used to classify ground moving targets.
- An improvement in performance over popular state-of-the-art method is demonstrated.
- Targets can be accurately classified at ranges exceeding 1km.
- The model can distinguish between different classes of animals and humans.
- The accuracy ranges from 75
