Neural network modeling for a two-stage production process with versatile variables: Predictive analysis for above-average performance

He-Boong Kwon , Jooh Lee , Kristyn N. White Davis

PII: S0957-4174(18)30066-6
DOI: [10.1016/j.eswa.2018.01.048](https://doi.org/10.1016/j.eswa.2018.01.048)
Reference: ESWA 11796

To appear in: *Expert Systems With Applications*

Received date: 20 October 2017
Revised date: 8 January 2018
Accepted date: 29 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A standalone neural network approach to model sequential production processes
- Salient above-average performance model in a two-stage process
- Prediction-focused model overcoming shortfalls of DEA
- Neural network application to the two-stage bank production process
- Neural network-based performance segmentation and efficiency analysis
