Optimization of Computer Aided Detection systems: an evolutionary approach

Lia Morra, Nunzia Coccia, Tania Cerquitelli

PII: S0957-4174(18)30034-4
DOI: [10.1016/j.eswa.2018.01.028](https://doi.org/10.1016/j.eswa.2018.01.028)
Reference: ESWA 11776

To appear in: *Expert Systems With Applications*

Received date: 11 August 2017
Revised date: 23 December 2017
Accepted date: 19 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Genetic algorithms selected optimal parameters for breast masses detection
- A general-purpose multi-objective framework balanced sensitivity and specificity
- We defined a modified asymmetric Dice coefficient to avoid over-segmentation
- Association rule mining characterized the effect and significance of each parameter
