Design and implementation of a multibiometric system based on hand's traits

Javad Khodadoust, Ali Mohammad Khodadoust, Xiong Li, Saru Kumari

PII: S0957-4174(17)30857-6
DOI: [10.1016/j.eswa.2017.12.035](https://doi.org/10.1016/j.eswa.2017.12.035)
Reference: ESWA 11736

To appear in: *Expert Systems With Applications*

Received date: 11 June 2017
Revised date: 8 December 2017
Accepted date: 19 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A multibiometric system, which uses five fingers and one palm, is proposed
- An indexing algorithm based on ellipse properties is proposed
- The proposed feature vectors are invariant to rotation and translation
- A combined MCC-based indexing algorithm is proposed
- The experimental results show the validity of the proposed algorithm
