This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A chaos-based method, called CVABC, is proposed for numerical function optimization.
- CVABC uses logistic maps to generate initial individuals which are fully diversified.
- A novel search strategy is used to improve exploitation and exploitation properties.
- CVABC has higher convergence speed and better search ability than other methods.
