This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We show that annotators go through a learning and exploitation phase while labeling
- In the learning phase annotators refine their conceptual model
- In the exploitation phase annotators apply their conceptual model to unknown tweets
- Labels assigned by annotators in their exploitation phase are more reliable
- Labeling costs for tweets are lower in an annotators exploitation phase
