This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- An efficient subpopulation strategy is designed to increase the diversity of the teacher phase.
- A novel ranking differential vector strategy is presented to promote the convergence of the learner phase.
- A dynamic weighted sum is formulated to achieve the tradeoff between constraints and objective function.
- A simple yet effective restart strategy is presented to settle complicated constraints.
