This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Our method is capable of analyzing social network debates. Preferred points of view and participants' consensus are calculated.
- Since our method use free text as an input, there is no need for users to follow any rule when expressing themselves.
- The debate can be carried out in any network as long as text from participants can be accessed.
- The number of users participating in the debate process is not limited.
