This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- We show how to briefly describe a large set of meta-paths in heterogeneous networks
- We formalize reliable recommendation meta-paths for neighborhood collaborative ranking
- We project TPG to networks that solely consists a special set of meta-paths
- It is guaranteed that ReGRank scores items through reliable meta-paths in TPG.
