VazaDengue: An Information System for Preventing and Combating Mosquito-Borne Diseases with Social Networks

Leonardo Sousa, Rafael de Mello, Diego Cedrim, Alessandro Garcia, Paolo Missier, Anderson Uchôa, Anderson Oliveira, Alexander Romanovsky

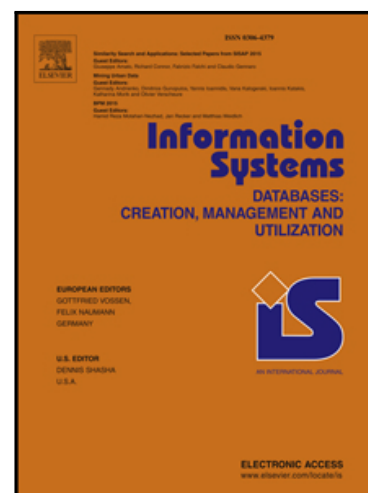

PII: S0306-4379(17)30618-X
DOI: [10.1016/j.is.2018.02.003](https://doi.org/10.1016/j.is.2018.02.003)
Reference: IS 1285

To appear in: *Information Systems*

Received date: 10 October 2017
Revised date: 11 February 2018

Please cite this article as: Leonardo Sousa, Rafael de Mello, Diego Cedrim, Alessandro Garcia, Paolo Missier, Anderson Uchôa, Anderson Oliveira, Alexander Romanovsky, VazaDengue: An Information System for Preventing and Combating Mosquito-Borne Diseases with Social Networks, *Information Systems* (2018), doi: [10.1016/j.is.2018.02.003](https://doi.org/10.1016/j.is.2018.02.003)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Requirements for surveillance of mosquito (VazaDengue features).
- Classifier characteristics to identify relevant mosquito-related tweets.
- Patterns of tweets that health agents perceive as relevant.
- Patterns of tweets that health agents perceive as non-relevant.
- Geolocated tweets can be useful to monitor potentially critical cities.
