This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This work introduces a formal methods approach to semiotic engineering
- Methods support the modeling of human–system interface signifiers
- Measures reason about effective and efficient designer-to-user communication
- Potential designer-to-user communication problems are identified in a medical device case study
