This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We explore bodily sensation maps (BSMs) as a novel way to detect emotions
- We propose EmoPaint, a mobile app to collect BSMs and detect emotions from them
- A user study reveals that the app is easy to use and able to detect emotions
- The app improves accuracy over a traditional method: Affect Grid with Circumplex model
