This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

**Highlights**

- There was no relationship between memory performance and correct password recall.
- General metamemory constructs could predict memory performance, but not password recall.
- The contextualized password metamemory constructs of Capacity, Locus, Achievement, and Task predicted correct password recall.
- There was a difference between the contextualized password metamemory constructs that predicted password recall, in comparison with the generalized metamemory constructs that predicted memory performance.
