This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Goal of this work is to classify affective states of Valence and Arousal using functional Near Infra-Red Spectroscopy
- Use Russel's circumplex model as the representation of affect
- Suggest novel method of using Brain "Regions of Interest" as a feature extraction technique for fNIRS based machine learning
- Across subject classification provided higher f1-score for Valence (.739) than previous literature
