This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A data imputation framework suitable for values with complex semantics in various types is proposed.
- An index-based knowledge base intrieval is proposed which can speed up computation of the framework.
- An inference algorithm on knowledge base for missing value imputation is designed based on the framework.
- Extensive experiments are performed to show that the proposed methods are effective and efficient.
