This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

1. This type of architecture for a ring of diffusively-coupled neurons is new.
2. Regard τ and β as two parameters in analyzing the synchronized dynamics of partial-differential equation (PDE) system.
3. Diffusion may make the ring system synchronous.
4. Diffusion to a stable delay-differential equation (DDE) system may make it unstable.
5. The coexistence of bifurcating periodic solutions and bistability or instability and bistability.
