Saliency Detection and Region of Interest Extraction Based on
Multi-Image Common Saliency Analysis in Satellite Images

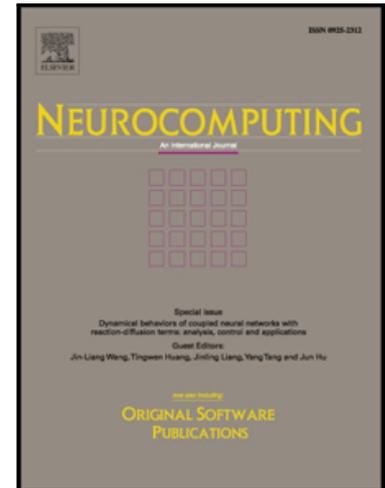

Libao Zhang , Qiaoyue Sun

PII: S0925-2312(17)31901-X
DOI: [10.1016/j.neucom.2017.12.039](https://doi.org/10.1016/j.neucom.2017.12.039)
Reference: NEUCOM 19173

To appear in: *Neurocomputing*

Received date: 4 August 2016
Revised date: 28 July 2017
Accepted date: 16 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- ROIs are effectively extracted from satellite images by multi-image common saliency analysis.
- Salient detection based on feature clustering among multiple multispectral images is proposed.
- Panchromatic image saliency analysis is introduced by computing co-occurrence histogram.
- A novel fusion strategy is proposed to obtain the multi-image saliency maps.
