

Accepted Manuscript

On Domain Driven Design Using Annotation-Based Domain Specific Language

Duc Minh Le, Duc-Hanh Dang, Viet-Ha Nguyen

PII: S1477-8424(17)30204-X
DOI: [10.1016/j.cl.2018.05.001](https://doi.org/10.1016/j.cl.2018.05.001)
Reference: COMLAN 296

To appear in: *Computer Languages, Systems & Structures*

Received date: 29 December 2017
Revised date: 23 March 2018
Accepted date: 2 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A DSL-based domain-driven design method is proposed for object-oriented software.
- The domain model is defined in an annotation-based DSL named DCSL.
- Structural mapping of domain class helps generate the behavioural specification.
- A DCSL-based technique is proposed for behavioural modelling with activity diagram.
- A 4-property characterisation is proposed for software generated from domain model.
