Experimental and quantitative analysis of server power model for cloud data centers

Wei-Wei Lin, Wen-Tai Wu, Hao-Yu Wang, James Z. Wang,
Ching-Hsien Hsu

PII: S0167-739X(16)30687-2

DOI: <http://dx.doi.org/10.1016/j.future.2016.11.034>

Reference: FUTURE 3240

To appear in: *Future Generation Computer Systems*

Received date: 24 August 2016

Revised date: 9 November 2016

Accepted date: 27 November 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights (for review)

1. Modeling server power at component-level.
2. A systematic review on widely-used component power models.
3. Quantitative analysis based on SPEC data and experimental evaluations.
4. Research hotspots and prospects related to power model.
