This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

*Manuscript with source files (Word document)

Highlights of paper

Specifically, we regard our key contributions to the following,

1. Design of novel dissimilarity function which retains monotonicity property.
2. Defining standard deviation for Gaussian membership function.
3. Defining threshold equation for transformed space.
4. Defining expressions to compute temporal distance bounds.
5. Procedure to estimation of support bounds of temporal association patterns.
