This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Addressing energy and time constrained scheduling of precedence constrained parallel tasks;
- Deriving lower bounds for optimal solutions;
- Developing pre-power-determination algorithms and post-power-determination algorithms;
- Considering multiple manycore processors with continuous or discrete speed levels;
- Evaluating the performance of these algorithms analytically and experimentally.
