This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

Proposed a real-time algorithm to minimize the cost of caching and data distribution over a wireless link.

Analyzed the theoretical characteristics of the cooperative delivery scheme for data sharing.

Performed extensive simulations to evaluate the performance of our design.

Compared the performance of our algorithm with that of non-cooperative data delivery and three peer schemes.
