This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Analysis of interaction design focusing on a holographic projection system for cultural heritage exploration in a museum context
- Design of task- and domain-specific touchless interaction techniques
- Quantitative and qualitative user studies aimed at empirically investigating users' preferences in relation to interaction techniques when used in a museum context
