Please cite this article in press as: M. Harada, New quantum codes constructed from some self-dual additive \mathbb{F}_4 -codes, *Inf. Process. Lett.* (2018), <https://doi.org/10.1016/j.ipl.2018.05.008>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- For $(n, d) = (66, 17), (78, 19)$ and $(94, 21)$, we construct quantum $[[n, 0, d]]$ codes which improve the previously known lower bounds on the largest minimum weights among quantum codes with these parameters. These codes are constructed from self-dual additive \mathbb{F}_4 -codes based on pairs of circulant matrices.
