Accepted date: 19 March 2018

Please cite this article in press as: É. André, S.-W. Lin, The language preservation problem is undecidable for parametric event-recording automata, *Inf. Process. Lett.* (2018), <https://doi.org/10.1016/j.ipl.2018.03.013>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This problem remains undecidable for parametric event-recording automata (PERAs), a subclass of PTAs that considerably restrains the way the language can be used.
- It remains undecidable even for slightly different definitions of the language.
