This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We consider the fixation probability with respect to the initial mutant vertex.
- We aim in finding graphs with many “strong starts” or “weak starts” of the mutant.
- We introduce the notions of selective amplifiers and selective suppressors.
- We prove the existence of strong selective amplifiers and suppressors.
- We provide almost tight lower bounds for the fixation probability (Thermal Theorem).
