

## Accepted Manuscript

Reproducing dynamics related to an Internet of Things framework: A numerical and statistical approach

Salvatore Cuomo, Pasquale De Michele, Francesco Piccialli, Arun Kumar Sangaiah

PII: S0743-7315(17)30209-5  
DOI: <http://dx.doi.org/10.1016/j.jpdc.2017.06.020>  
Reference: YJPDC 3710

To appear in: *J. Parallel Distrib. Comput.*

Received date: 20 January 2017  
Revised date: 26 April 2017  
Accepted date: 25 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- we focus on a methodology able to “predict” the museum visitors dynamics;
- Clustering techniques have been preliminary used to classify spectators;
- we adopt a powerful statistical method to reproduce the visitors dynamics ;
- we relies on an IoT system immersed in the cultural environment
