This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

***Highlights (for review)**

New Scheduling Approach using Reinforcement Learning for Heterogeneous Distributed Systems

Highlights

- Reinforcement learning algorithm for scheduling problem
- Integrate machine learning methods in systems that use task schedulers
- Q-learning and state-action-reward-state-action methods
- DAG scheduling on dynamic clusters
- Variable tasks and task classification
