Please cite this article as: M.A. Oxley, et al., Rate-based thermal, power, and co-location aware resource management for heterogeneous data centers, *J. Parallel Distrib. Comput.* (2017), http://dx.doi.org/10.1016/j.jpdc.2017.04.015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

In summary, we make the following novel contributions:

- Derivation of a new detailed model of a heterogeneous data center.
- Design of resource management methods for co-location, power, and temperature.
- Analyses of resource management methods using several facility configurations.
- Sensitivity analysis under a range of constraint values and workload environments.
