This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Proposing a thermal-aware scheduling method for both SMT and Non-SMT multi-core processors based on the different thermal behavior of cores due to their *core unique thermal behavior*.
- Experimental results on commercial processors indicate that our proposed approach, under full workloads, outperforms the Linux standard scheduler and two existing DTM techniques.
- One of the unique features of the proposed algorithm is that it has an adaptive temperature threshold, unlike previous work in which all of them assume that temperature threshold is a fixed value.
