This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We introduce Hybrid Analysis as an efficient way to validate F-Alloy specifications.
- We propose an F-Alloy extension to specify compound model transformations.
- We describe VBV, a domain specific validation process for model transformations.
- VBV is based on compound model transformations.
