This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- We propose a novel algorithm to generate block-structured hexahedral meshes for any CAD domain.
- The proposed approach does not require a pre-meshed boundary.
- The frame field is build so that singularities are better positionned.
- A skeleton is built using the frame field.
- Each part defined by the skeleton can be meshed with a structured mesh.
