A Work Flow to Build and Validate Patient Specific Left Atrium
Electrophysiology Models from Catheter Measurements

Cesare Corrado, Steven Williams, Rashed Karim, Gernot Plank,
Mark O'Neill, Steven Niederer

PII: S1361-8415(18)30207-X
DOI: [10.1016/j.media.2018.04.005](https://doi.org/10.1016/j.media.2018.04.005)
Reference: MEDIMA 1365

To appear in: *Medical Image Analysis*

Received date: 29 September 2017
Revised date: 16 February 2018
Accepted date: 19 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Locally personalised atrial electrophysiology
- Predictive simulations
- Catheter measurements
- Clinical time scale
- Atrial fibrillation
