This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A highly efficient and effective fully residual convolutional neural network is proposed for cell detection.
- We validate the superiority of structured regression over the conventional pixel wise classification method for cell detection.
- We prove the robustness and generalization capability of our model using four datasets, each corresponding to a distinct staining method or image modality.
