This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- An echocardiogram stabilization method is proposed for sensor motion compensation.
- An efficient strategy based on keyframe selection avoids pairwise alignment.
- VSPAK outperforms other methods in terms of alignment accuracy.
- VSPAK is effective as a preprocessing step for echocardiogram applications.
