Towards patient-specific modeling of mitral valve repair: 3D transesophageal echocardiography-derived parameter estimation

Fan Zhang, Jingjing Kanik, Tommaso Mansi, Ingmar Voigt, Puneet Sharma, Razvan Ioan Ionasec, Lakshman Subrahmanyam, Ben A. Lin, Lissa Sugeng, David Yuh, Dorin Comaniciu, James Duncan

PII: S1361-8415(16)30168-2
DOI: [10.1016/j.media.2016.09.006](https://doi.org/10.1016/j.media.2016.09.006)
Reference: MEDIMA 1191

To appear in: *Medical Image Analysis*

Received date: 15 April 2015
Revised date: 12 September 2016
Accepted date: 19 September 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlight

- A semi-automatic framework to build patient-specific models of mitral valve from medical images under user guidance
- Chordae rest length and material parameters are optimized to calibrate patient-specific models to simulate mitral valve closure consistently with observations from TEE images
- First study to our knowledge to estimate material parameters of mitral leaflets on humans from TEE images
- Simulated mitral valve closure from 14 sets of images on 15 patients are compared to the ground truth estimated from TEE images with promising accuracy
