Identification of lesion images from gastrointestinal endoscope based on feature extraction of combinational methods with and without learning process

Ding-Yun Liu , Tao Gan , Ni-Ni Rao , Yao-Wen Xing , Jie Zheng , Sang Li , Cheng-Si Luo , Zhong-Jun Zhou , Yong-Li Wan

PII: S1361-8415(16)30026-3
DOI: [10.1016/j.media.2016.04.007](https://doi.org/10.1016/j.media.2016.04.007)
Reference: MEDIMA 1103

To appear in: *Medical Image Analysis*

Received date: 16 December 2015
Revised date: 22 March 2016
Accepted date: 22 April 2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An efficient learning algorithm for dimension reduction of high dimensional data.
- An novel feature extraction strategy combining methods with and without learning.
- An accurate method of identifying gastrointestinal endoscopic images with lesions.
