Automated Classification of Brain Tumor Type in Whole-Slide Digital Pathology Images Using Local Representative Tiles

Jocelyn Barker , Assaf Hoogi , Adrien Depeursinge ,
Daniel L. Rubin

PII: S1361-8415(15)00183-8
DOI: [10.1016/j.media.2015.12.002](https://doi.org/10.1016/j.media.2015.12.002)
Reference: MEDIMA 1062

To appear in: *Medical Image Analysis*

Received date: 25 February 2015
Revised date: 2 December 2015
Accepted date: 7 December 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Rough feature extraction and clustering is used to reveal the diversity of large data
- Independent evaluation of representative regions avoids signal dilution
- Signal based aggregation of data subsets gives strong predictions in noisy data
- A diverse feature set allows for better modeling of pathology images
