This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Presents cloud-based Smart Vehicle Parking System (SVPS) applying VANETs.
- Novel algorithm that provides an appropriate vacant parking space allocation.
- Parking Side Units (PSUs) are assigned along every parking facility for coordinated management.
- Extensive simulation tests for performance evaluation and best utilization of the existing parking infrastructure.
