This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We proposed a novel method to identify compromised controllers in SDN.
- Our method uses OpenFlow packet traces from SDN data plane.
- Nine new features are defined on OpenFlow to identify malicious controllers.
- The proposed method is independent of the number of controllers and network topology.
