This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- It is extremely important to develop a framework and a maturity model that allow organizations to implement and improve Green IT in an efficient and integrated way.
- So far, there has been no maturity models specifically for the governance and management of Green IT among the different proposals of maturity models for sustainability.
- The proposed SPICE-based maturity model for the “Governance and Management Framework for Green IT” could be used as a guide to further implementing and improving Green IT.
