This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The consumers of cloud compete to attain a service with desired functional and nonfunctional requirements. There is also a competition space among the cloud providers to sell their services to the consumers.
- We surveyed Cloud Computing Service Negotiation (CCSN) models, frameworks, techniques, protocols, and strategies proposed by the CCSN researches.
- Evaluation results of the CCSN studies reveal that researchers need to design a negotiation strategy for cloud service negotiation problem which efficiently matched with requirements of the consumers and the providers.
