Biographical Sketch

Myria Bouhaddi received her Master degree in Mathematical Modeling and Decision-Making Methods in 2012 from university Abderrahmane Mira of Bejaia, Algeria. She is currently working toward the Ph.D. degree in operations research at the university of Bejaia, in collaboration with the Laboratory for Research in Computer Security at the university of Quebec in Outaouais, Canada. Her research interests mainly focus on wireless networks, intrusion detection and game theory.

Mohammed Saïd Radjef is a full professor in operations research at the university of Bejaia, where he leads the research team "Cybernetic Methods and Optimization" in the Research Unit LaMOS (Modeling and Optimization of Systems) and the doctoral training "Operations Research and Decision Support" in the department of operations research. His research interests include game and decision theory, multi-criteria programming and applications in wireless ad-hoc networks, transportation, queuing systems, clustering and industrial economy.

Kamel Adi holds a Master degree in theoretical computer science from Pierre et Marie Curie (Paris VI) university and a Ph.D. degree in computer security from Laval university, Quebec, Canada. He is currently a full professor in the department of computer science and engineering at the university of Quebec in Outaouais, Canada. Kamel Adi is also the co-director of the Laboratory for Research in Computer Security. His research activities focus on the development and application of formal methods for solving problems related to computer security and computer networks.
