This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

#### ACCEPTED MANUSCRIPT

## **Graphical abstracts**

A multi-objective optimization model of attack localization task allocation in wireless sensor networks includes constructing objective functions consisting of total task execution time, total energy consumption and load balance and constructing the constraints consisting of the work load and the received signal strength space constraints.
