This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- A literature review aimed at identifying tools that best support end users in managing and controlling smart homes is presented.
- An experimental study with real users, which compares three tools for smart home control is reported.
- Design implications for developing future user interfaces for smart home control and management are defined.
