This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We characterize the phenomenon of requirements specification in projects using agile practices;
- We report the results of a cross-case analysis and synthesis of six industrial case studies;
- We propose a model about the factors affecting the quality of requirements in agile projects;
- The model defines simplicity and objectivity of requirements as essential quality factors;
- The model argues that the requirements should be directed to the development team.
