Combinatorial Double Auction-based Resource Allocation
Mechanism in Cloud Computing Market

Seyedeh Aso Tafsiri , Saleh Yousefi

PII: S0164-1212(17)30281-9
DOI: [10.1016/j.jss.2017.11.044](https://doi.org/10.1016/j.jss.2017.11.044)
Reference: JSS 10079

To appear in: *The Journal of Systems & Software*

Received date: 12 February 2017
Revised date: 3 October 2017
Accepted date: 18 November 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A combinatorial double auction-based market for cloud computing is studied.
- An integer linear programming optimization model is proposed for the market.
- A heuristic resource allocation algorithm is proposed for the optimization model.
- Trustworthiness, Fairness, Economic and allocation efficiency are proved.
- Simulation by means of CloudSime confirms the efficiency of the proposed algorithm.
